Description

The SC325D is our customized version of the TX325. It is a 2 wire only telephone with loud speaking hands free and PA announcement reception. It is to be used in protected environment like offices and cabins, where it can be either put on a desk top or mounted on a bulkhead using 2 screws.

Direct-in calls can be made to the SC325D, and it will receive PA announcements when connected to a SeaCom exchange. The way these functions are realized is through an exchange controlled push to the speaker button.

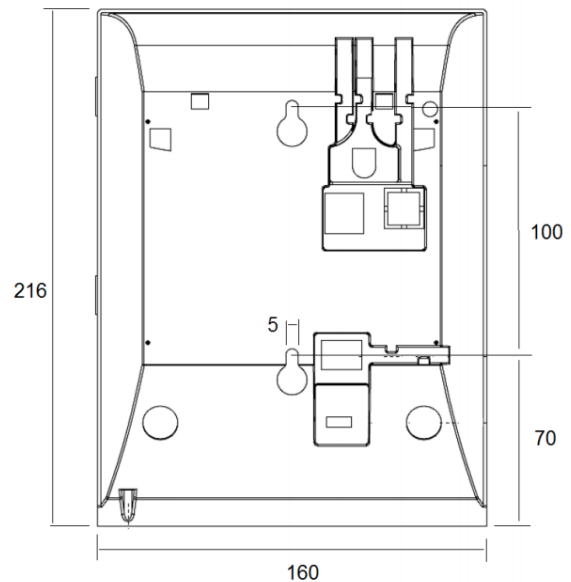

When a call comes in to the SC325D, the FSK based signaling from the exchange will pass caller name and caller number to the display. Together with these data are date and time, which will be updated every time the telephone is ringing.

This product is not type approved.
